FARM EMPLOYMENT
INFORMATION GUIDE

Tables and Graphs Showing Farm Employment From
January to October, 1943

- - -

In planning an informational program for farm labor, it is well to know the seasons during the year in which labor needs are greatest, so that proper emphasis can be placed upon recruiting efforts. This leaflet is designed to provide that information, based on actual farm employment numbers for the first 10 months of 1943.

In this book are 10 tables and accompanying graphs, giving figures not only on total farm employment, but also a breakdown between family workers and hired workers. The first table and graph give totals for the United States. The remaining nine sets represent nine geographical regions of the United States. All figures are taken from the monthly Farm Labor Reports of the Bureau of Agricultural Economics.

Through the use of the regional data, informational plans can be made on a regional basis, since the peak periods of farm employment vary among areas.
